ABOUT

I majored in visual design and worked as a service planner, thinking beyond the screen about the overall user experience. Responsible for service operations and feature improvements, I analyzed real business requirements and turned them into concrete wireframes and storyboards. During development I collaborated with designers and developers, and after launch I personally verified the usage flow and functionality. Building on this experience, I aim to grow into a UX/UI designer who understands both business requirements and user experience together.

CAREER

efusioni

Commerce Planning Team, Associate

2023.07 — 2025.10 (2 yr 4 mo)

- Managed event planning design and system operations for a corporate group's employee shopping mall for about 2 years and 4 months
- Handled service operations, feature improvements, screen design, QA, and client communication
- Experience writing wireframes, storyboards, and test cases, and verifying releases
- Collaborated with developers and designers on new features and service enhancement projects

Event & Promotion Operations 2023.07 – 2024.03

Service Operations Planning · 1 Planner, 3 Designers

Supported production of feature-event and promotion imagery for a corporate employee shopping mall, collaborated with designers on event direction and design review, managed client requirements and revisions.

Result. Launched feature events on schedule through careful timeline management and task distribution, and improved operational quality through ongoing banner monitoring.

System Operations & Maintenance 2024.03 – 2025.10

Service Operations Planning · QA · 2 Planners, 1 Publisher, 1 Developer

Operated and improved a corporate employee shopping mall service, analyzed business requirements and defined features, designed screens (Wireframe, Storyboard), wrote test cases and performed QA, verified functionality after release.

Result. Organized operational requests into structured lists to improve communication, and supported key-feature QA and operational stability throughout the maintenance period.

SKILLS

Graphic Design

Photoshop

2020.07 **Craftsman Computer Graphics Operator**
HRD Korea · National technical qualification

COURSES

UX/UI Professional (Remain, 2023) · Mobile UI/UX Web Design (Hongsi Design Academy, 2023) · UI/UX Web Publisher Training (Hongsi Design Academy, 2022–23) · Applied AI Foundations / AI Foundations (OpenAI, 2026)

AWARDS

Encouragement Award, Incheon Takju Label Design Contest (2018) · Bronze Prize, Yeongcheon Nat'l Cemetery Illustration Contest (2018)

Dear Hiring Manager,

I majored in Visual Design and have over two years of experience in digital service planning, where I learned how good design makes digital services easier and more comfortable to use.

Studying Visual Design taught me that small differences — type size, spacing, how information is arranged — are what decide whether a screen actually feels finished. As a service planner, I carried that same instinct into wireframes and storyboards, thinking through how users would actually read and act on the information in front of them, then testing the flow myself once it shipped.

In my previous role, I worked closely with clients, designers, and developers to turn business requirements into concrete screens. Rather than passing requirements along as-is, I reviewed existing service policy and screen flows to work out the features and edge cases actually needed, then translated that into wireframes and storyboards — reviewing UI flows and working with developers to make sure designs were implemented as planned.

When I ran into communication gaps with developers while operating a shopping-mall system, I taught myself SQL rather than waiting for someone else to bridge the gap — a habit I plan to keep as I pick up new UX/UI tools and methods.

Outside my professional experience, I have also run my own digital product stores, designing and selling printable products for a global audience. By analyzing SEO keywords, customer search behavior, and competitor listings, I refined both the products and their listings, and by continuously tracking view and sales data I grew sales past 310 orders — a reminder that even small, data-informed changes can move the needle.

Much of my planning work centered on interface design, wireframing, and cross-functional collaboration. While I haven't yet run formal user interviews, I've improved interfaces through usability testing, QA, and feedback gathered during development. I'm looking forward to growing further as a UX/UI designer who builds intuitive experiences around real user problems.

Thank you for your time and consideration.

Sincerely,
Heeyeon Jang
